

# From DMS data to dealership decisions - without the guesswork.

Conversational queries on live DMS data

Deal accountability and pipeline tracking

Floor plan interest monitoring  
Inventory aging alerts

Works inside systems your team already uses

## \$1.2T

US auto retail revenue / year

## 17k+

franchised dealerships

## \$50M+

avg. annual revenue per store

### The Problem

Your DMS holds years of operational data. Getting a straight answer out of it means pulling reports, waiting on your controller, or building dashboards that are outdated before you finish reading them.

### What Auto AI does

Auto AI connects directly to your DMS and lets your team ask questions in plain English. Inventory aging, floor plan costs, deal status, accountability gaps — real answers in seconds, not reports in two days.

### Who is it for

Dealer principals, GMs, and finance directors on DealerTrack or other DMS who need to know what is happening in their store right now, not what was true last week.

## How Auto AI works

Connect

Links to your DMS with no migration, no IT project.

Ask

Any team member types a question in plain English.

Act

Get a direct answer and make the call the same day.
